

Robots and humans, and exhibition to reflect on our relationship with technology

LOCATION: Granada

DURATION: 1'40"

SUMMARY: Throughout 2017, the visitors of the Science Park of Granada can enjoy an exhibition that explores the existing relationship between humans and machines. 'Robots, humans and machines' shows the history of robotics and also offers workshops to bring visitors closer to this branch of science.

VTR:

BACKGROUND

"Welcome to our exhibition 'Robots, humans and machines'. If you wish, I can guide you through this exhibition and show you some of our most interesting pieces."

A robot welcomes us in this exhibition held in the Science Park of Granada. Here, they are the protagonists.

Manuel Roca
Production chief of the exhibition

"The purpose of the 'Robots' exhibition is to talk about the relationship between humans and machines."

Five areas where we can reflect on the essence of humans and dive in modern technology through an historical tour. The first mentions to these machines in literature, the first robots, those able to get to places that are inaccessible to humans, those that are used in medicine and that are inside our bodies, or those that serve the industry.

Manuel Roca
Production chief of the exhibition

"Very attractive pieces; some of them due to their historical value and others because visitors find them innovative. They discover that there are many types of robots, and they are also surprised to be close to robots that they had only seen on books, pictures or the Internet."

It is the case of Nao, a small robot that is used to study the relationship between robots and humans in the labour sphere. Or those that guide us through this exhibition. In addition, there is a workshops space.

Vicente Fernández
Educational activities technician

"Robotics workshops, so that through Arduino and Lego, they can program, learn about programming design, and enter the 'maker' world through 3D printers."

Here, you can also learn how to make you own robotics pieces.

Vicente Fernández
Educational activities technician

"Do it yourself'. We organise a series of activities according to which we show visitors what they can do and how to do it."

A space to discover, be amazed and think.
