

Índices Dependencia: an app that evaluates memory loss for the early detection of Alzheimer's disease

LOCATION: Granada

DURATION: 1'13"

SUMMARY: 'Índices Dependencia' is a new app designed in Granada by the company 'Grupo Trevenque' that contains all the existing tests used by doctors and caregivers to evaluate the memory loss or the dependence levels of a person. Its goal is detecting the early symptoms of diseases such as Alzheimer's or Dementia.

VTR:

AMBIENCE

"Can you get dressed on your own? Do you need help? Or do you need someone to do everything for you?"

"No, not everything."

This is one of the questions that we can find in the eight tests contained in this news app designed in Granada by Grupo Trevenque. Its objective is evaluating memory loss or the dependence level of a person, including the same questions normally used by doctors and social workers.

Julio Galiano **App development responsible**

"It is a free mobile app that permits professionals, relatives or any other person, evaluating the dependence and disability levels of the users."

A tool that permits delaying the symptoms of diseases such as Alzheimer's or Dementia.

Pedro Reyes **App development responsible**

"You can calculate tests related with Alzheimer, regarding memory loss or tests related with their social and health environment."

It is aimed at professional caregivers but also at people who take care of a relative.

María del Carmen Samaniego **Professional caregiver**

"The best thing is that you can detect it with a lot of anticipation, before having a more serious problem. It helps us a lot, and not just us but also informal caregivers, family."

This app contains all the tests used in this field and it is available for Android devices. 2.000 users have already downloaded it, most of them from Latin America.
