

## **ClinicsApp: pregnancy follow-up with an app which transfers ultrasounds and medical histories**

LOCATION: Cordova

DURATION: 1'36"

**SUMMARY:** ClinicsApp is the first app aimed at pregnant women able to transfer 3D and 4D ultrasounds or the medical history of the patient to a mobile device in order to share it almost instantly via WhatsApp. Javier Tobío, from Cordova, is the one who has created this system which enables patients to maintain constant communication with the clinic throughout pregnancy, apart from having access to the images and videos of the baby so they can file or share them in real time with family and friends.

### **VTR:**

This couple will be able to share, almost instantly, ultrasounds and videos of their baby which were recorded in their visits to the gynaecologist. They do it through an app created by a company in Cordova.

**JAVIER TOBÍO**  
Creator of Clinicsapp

*"For the first time you can have access to 3D and 4D ultrasounds with Full HD quality from your mobile. You can share ultrasounds via WhatsApp."*

This type of ultrasound is performed at 21 to 25 weeks and permit seen the baby in a much more detailed way. The app stores the pictures and the video of the gestation, which can be shared via WhatsApp or social media, and also the patient's medical history: gestation period, ultrasounds, videos or analysis.

**BALBINO POVEDANO**  
Gynaecologist

*"The most important advantage offered by this app is that it enables us to maintain fluid communication with the patient. This is very beneficial because when patients go somewhere else, see another doctor or go to another country, they can take their medical history with them in their mobiles."*

There are about 450.000 pregnancies in Spain per year. The emotions aroused by being in touch with the baby before birth, have made this app reach over 3.000 downloads.

**MARÍA DOLORES ALBA**  
Future mom

*"I can share them with my brother, who lives outside the city and is excited about being able to see the images in real time and fast, it is a great advantage for me."*

**JAVIER LUQUE**  
Future dad

*"I can't experience pregnancy the way she does, so I think that it is very interesting to be able to have the pictures, or even videos, of our daughter in the mobile."*

This app developed in Cordova is already being used by over 20 clinics in Spain.
