

Genesys, the Andalusian invention that saves up to 70% on your electricity bill

LOCATION: El Viso del Alcor (Sevilla)

DURATION: 1'44"

SUMMARY: There is a prototype already and it is called 'Genesys'. We are talking about a machine that, according to its creators, is able to reduce energy consumption by up to 80% and saves up to 70% on the electricity bill. Its creator, an engineer from Seville, claims that he has been offered millions for the patent but he has rejected them. His goal is to bring his invention to every home.

VTR:

Can you imagine a machine able to reduce energy consumption by up to 80% and save up to 70% on the energy bill? This machine already exists, according to its creators. It is this one, and has been created in El Viso del Alcor, Seville.

MARIANO FRAILE
Energieed Spokesman

"We just take a 20% of the energy we need to keep our facilities running from the electric grid."

It is still a prototype. It looks like a generator that is plugged into the electric grid, and is it multiplies the incoming energy. The spokesman of the company carries out a demo with this measuring device converting power from amps to watts.

MARIANO FRAILE
Energieed Spokesman

"It is going through the counter. We are consuming around 400 wats, and we are providing our facilities with 2,000 wats."

This means that the user could receive five times the power he is paying for. Its inventor is a 34 year old Sevillian engineer who prefers to remain anonymous. He claims to have been offered millions for the patent, but he has refused them. And, how does it work?

MARIANO FRAILE
Energieed Spokesman

"We have been able to produce what is called a wave misalignment, increasing the frequency in a shifter. We cheat this shifter making it believe that the incoming frequency is three times higher than usual, so we can turn a two amps single-phase signal into a three-phase signal with three amps per phase."

The machine installed in this office is scalable and could supply from a home to a whole neighbourhood.

MARIANO FRAILE
Energieed Spokesman

"So this system becomes accessible for the population and anyone can benefit from it."

In a year, they intend to create a smaller machine for domestic use that will cost 3,000 euros. If what this company claims is true, this is a completely revolutionary invention.
