

## An alarm that distinguishes people from animals to avoid false warnings

**LOCATION:** La Rinconada, Seville

**DURATION:** 1'31"

**SUMMARY:** Ontech Security, a company based out of Seville, and their engineers have invested three years of work in the development of Wardian, an alarm system designed to detect disturbances in magnetic and electrostatic fields in the vicinity of a home. It protects doors and windows and differentiates between people, objects and animals. It is only triggered by people, so it avoids false alarms. Thanks to Wardian, this company won the first prize in the ICS West held in Las Vegas in 2016, the most important fair of the sector.

### VTR:

An intruder tries to enter a home. But, when he touches the door, this is what happens... It is the alarm system with which an Andalusian company tries to revolutionize the international home security industry.

**JUAN APONTE**  
**Ontech Security CEO**

*"It is based in the monitoring and detection of disturbances to magnetic and electrostatic fields made by people, animals, or objects".*

A dog is wandering around a home. The system, activated from the inside, protects windows and doors, but nothing happens when the dog touches the door. If it were a person, the system, which differentiates between people, objects and animals, sends an alert to the owner's cell phone.

**JUAN APONTE**  
**Ontech Security CEO**

*"You can set up how much time does the person have to wander around the door or the window to trigger a preventive alarm. It's an incredible fact that 93 out of 100 alarms are false."*

Because when someone hits a window with an object like this... or animals move inside the home, traditional alarms are triggered. But this one is different. This system won first prize in the most important fair of the sector, the ICS West held in Las Vegas.

**JUAN APONTE**  
**Ontech Security CEO**

*"The large manufacturers are the ones that are going to commercialize this product, and with that they are going to set the time frame for commercialization"*

100% Andalusian technology that has already piqued the interest of large international companies.
